Academic education

- Ingeniería en Computación
Universidad de la República
(Udelar) ~ 2021 - Presente

Languages

- Spanish (Native)
- English (Anglo-B1+)

Work experience

2023, Ene - Present

Montevideo COMM - Programmer

At Montevideo COMM I developed technological solutions for web challenges, using HTML, CSS and JavaScript for the frontend, and complementing them with Genexus for the backend. I contributed to several projects, delivering innovative and customized solutions to clients. To mention one of them, I collaborated with the team to integrate AI in the creation of content for the news platform "Portal Montevideo".

University + Self-taught

2021 - Present

During my time at UDELAR, I immersed myself in Computer Engineering, acquiring solid foundations in technology and web development. However, my learning extended beyond the classroom. Outside of the curriculum, I delved into web application development, exploring front-end and back-end technology. This initiative expanded my skills beyond classroom teaching, fostering a deep understanding of web programming.

Career objective

I am looking for a place where I can apply innovative technological solutions. Eager to leverage the skills and knowledge acquired in web development to effectively contribute to dynamic teams in the technology industry. Seeking a challenging role where I can continue to learn, grow professionally, and make significant contributions to cutting-edge projects.
